

do file

1. create one
2. simple [example](#)
3. more to come

quietly

1. always your first command
2. can be edited to `noisily`
3. but that opens pandoras box

if 1 {

1. structure you script
2. blocks of code within `if "something" {`
3. may change to `if 0 { , noisily { , quietly {`

timer

1. `time on 1`
2. `timer off 1`
3. repeat for each `if x {` block of code

indentation

1. each block of code
2. user-friendly
3. requirement in python!

annotation

1. follows do file structure
2. no substitute for `help` command
3. shouldn't define commands, rather set context

output control

1. prefix command with `noisily`
2. clever use of `noisily di ""`
3. excellent for debugging

diagnostics

1. `di _N " " c(k)`
2. `isid PMID`
- 3.
